KF-100

VERTICAL FLOAT TYPE LEVEL INDICATOR

Principle of Operation

The model KF-100 is a float type level indicator. A float with a built-in magnet, which is put on a stem, floats on the surface and goes up and down as level varies. Reed Switches(SW) and Resistor(R) being built in the stem as described in the right figure, it can detect the resistance changes in the varying liquid level. These can be transmitted through the R/I Converter in the form of 4 – 20mA DC current signals.

b	Φ90×120×30	PVC (High-Viscosity)	Φ22	PVC	0.55	100A

Vertical Float Type Level Indicator
Generic Designation of Float Gages

Note: Float-code a and b having larger clearance dimensions between float and stem are effective to prevent the float from being stuck in the high viscosity liquid as well as liquids containing slurry and solid particles.
